Midterm Rubric: MVP Presentation

When: Friday, October 23, in class.
Worth: 10% of your final grade.

Format: each team gets 15 minutes. 7.5 minutes to present, 7.5 for questions from the room. All team members should be present and presenting.

What the midterm is: This is a product demo demonstrating your research, thinking, and your prototype. This is how you might present a product demo internally at a company, pre-launch.

What a team presents

Section 1

Use this slide structure:

1. **Title.** Company name and one liner.
2. **Team.** Team member names, headshots, and optionally roles if you use them.
3. **Problem.** The pain point, who it's for, context around it, how you know.
4. **Solution.** The high level vision of how they aim to solve the problem.
5. **Live demo.** A live walk through the working product. One single workflow is the minimum. You can do more if it fits in your 7min presentation, but remain focused on use cases, not features. Keep a close eye on time.

Scoring

Section 2

Professor St. Clair and both TAs (Shrey and Maanas) will grade every team, and the three scores are combined. Professor St. Clair reserves the option to override.

Each criterion is graded from 1 to 4, using the table below.

Criteria

Section 3

Criterion	1 (missing)	2 (thin)	3 (solid)	4 (strong)
Audience and personas	No audience or personas named.	A broad audience like "students," or personas with no sign of real interviews and voice of customer research.	A clear audience and personas, but thin on evidence they came from real research.	A specific audience and personas that clearly came from real interviews and research.
Idea and problem	No clear problem, or the idea fits no one they named.	The idea does not match the audience, or the problem is a guess or only skin deep.	A believable idea and problem, with a gap in the evidence.	The idea fits the people they named, and the root problem shows through what users actually do.
Solution and brand position	No solution or position.	No clear position, or a solution that just echoes a user's request.	A clear position and a solution, with a gap or two.	A clear position, and a solution they reasoned to from the root problem.
Problem-focused demo	No working demo.	A feature walkthrough, or nothing works and nothing is faked.	The demo mostly works and stays on the problem, with some drift.	A working demo that follows a real use case and stays on solving the problem; faked parts are named.

Additional notes

Section 4

- **Good sign:** they changed direction because of something a user said, and can name the moment.
- **Red flag:** every finding confirms their original idea.
- **Red flag:** team members tell different stories about who the user is.
- **Red flag:** one person presented, built, and answered everything.
